

Second Language Acquisition

LG 376 — Semester 2, 2021 (Jan-May 2022)

CLASS 12: LEARNER LANGUAGE

Sakol Suethanapornkul

Outline

- Recap: Cognition
- Learner language
 - Two approaches to the study of learner language
 - Cognitivist explanations for IL development
 - Processes of IL development
- PsychoPy: Setting up experiment
- Looking ahead: Week 13

Recap

Working memory (WM)

- Three “stages” of memory:

Long-term memory (LTM)

- Types or systems of long-term memory
 - **Explicit-declarative memory**
 - Encyclopedic knowledge of facts and events
 - Dictionary of words
 - **Implicit-procedural memory**
 - Memory for skills and procedures

Define.... “absurd”

Attention and L2 learning

- Attention came into L2 researchers' awareness as part of the **Noticing Hypothesis...**
- Some key characteristics of attention:
 - limited in its capacity-wise
 - selective (*bottleneck* or *filter* metaphors)
 - voluntary
 - regulating access to consciousness

Incidental

Explicit

Implicit

Learning without attention?

- **Incidental learning**
 - *Can L2 be learned incidentally? In other words, can L2 users learn new L2 materials without intention, while doing something else?*
- Intention ≠ attention
 - Can new L2 materials be learned without attention?
 - Schmidt's **Noticing Hypothesis**
 - Strong version: What learners notice in the input becomes intake
 - Weak version: More noticing leads to more learning

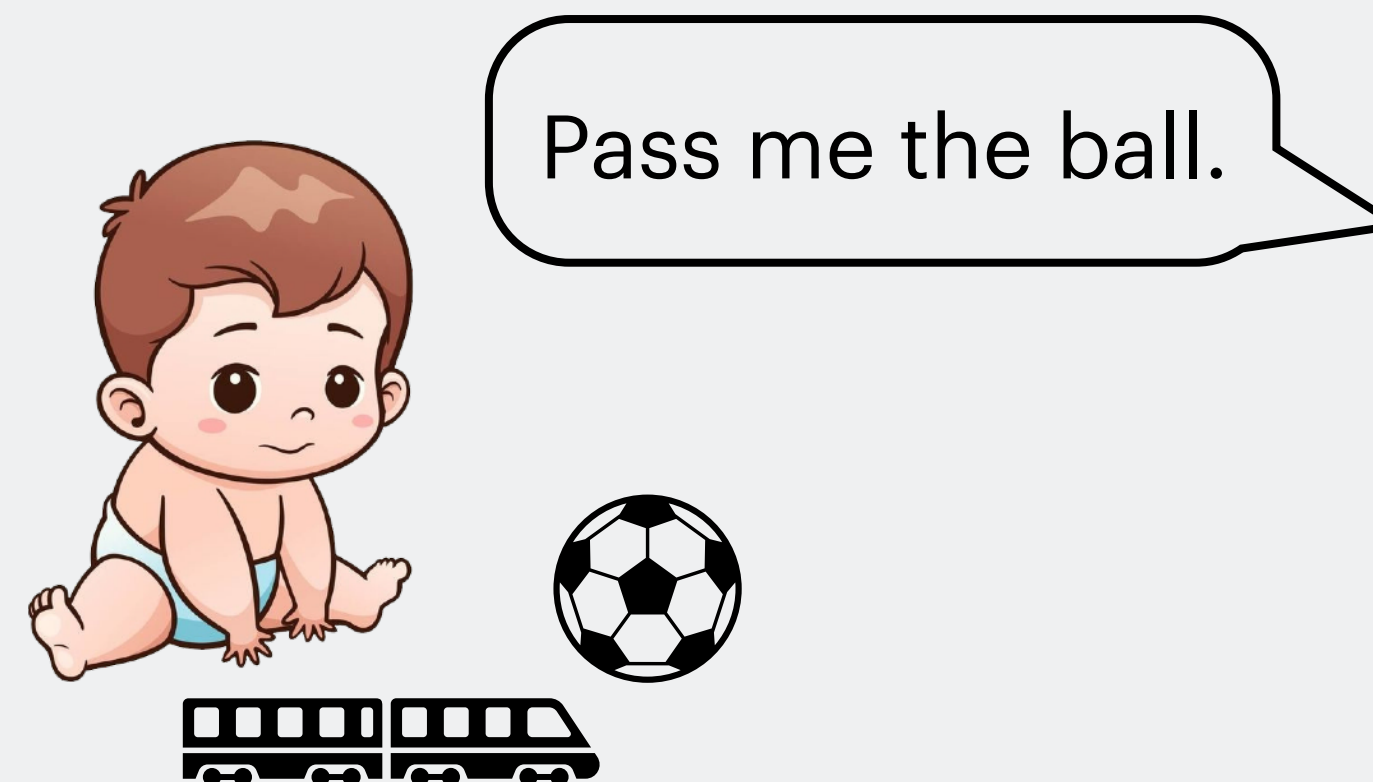

Learning without rules?

NOTE: the difference between this and skill acquisition theory

- **Implicit vs. explicit learning**

- *Can L2 be learned with no intervention of controlled attention? In other words, can L2 users learn an L2 without being given explicit rules?*

- Motivations:

<p>NOUN</p> <p>Refers to the words or phrases that represent a person, a place, a thing, or a quality or idea.</p> <p>E.g. dog, cat, elephant, school work, town, Manila, teacher, etc.</p>	<p>PRONOUN</p> <p>Refers to the words that are used instead of a noun or noun phrase in a sentence.</p> <p>E.g. he, I, its, me, my, she, that, this, those, etc.</p>	<p>VERB</p> <p>Refers to the words or group words that describe an action, experience, or express a state of being.</p> <p>E.g. run, sit, stand, go, have, get, promise, invite, etc.</p>
<p>ADJECTIVE</p> <p>Refers to the words that describe a noun or pronoun.</p> <p>E.g. angry, brave, careful, healthy, little, old, generous, tall, some, good, big, etc.</p>	<p>ADVERB</p> <p>Refers to the words that describe a verb, an adjective, another adverb, or a whole sentence.</p> <p>E.g. badly, fully, carefully, hardly, nearly, hungrily, never, etc.</p>	<p>ARTICLE</p> <p>Refers to the words that are used before a noun to modify the noun.</p> <p>E.g. the, a, an.</p>
<p>PREPOSITION</p> <p>Refers to the words that are used before a noun, pronoun, or gerund to show place, time, direction, etc.</p> <p>E.g. above, except, from, in, near, of, before, since, etc.</p>	<p>CONJUNCTION</p> <p>Refers to the words that connect words, phrases, or clauses in a sentence.</p> <p>E.g. and, or, so, after, since, before, either, neither, etc.</p>	<p>INTERJECTION</p> <p>Refers to the words or phrases that are used to express a strong feeling or emotion.</p> <p>E.g. ahem! ah! gosh! aw! great! hey! hi!, hooray, etc.</p>

Learner language

Setting the scene

Whole-class

What's wrong with these sentences? At what level do you think learners who produce these sentences are?

- Oceans affects your life
- We uses a lot of water each day
- People drinks a lot of water every day
- The salts is left behind
- Cold day affects our health
- This tell us that the composition of the ocean are in balance

Two approaches to learner language

- **Interlanguage:** language system that learner constructs at each point in development (Selinker, 1972)
 - Emphasis: development and performance
 - Analyzing actual L2 samples produced by learners
 - Inspiration: information processing then usage-based emergentism
 - Similar general cognitive learning mechanisms

Two approaches to learner language

- **Formalism, nativism:** L2 learning is constrained by an innate **Universal Grammar** (UG)
 - Emphasis: **competence** and mental representation
 - Asking L2 learners to judge if sentences are acceptable/grammatical
 - Probing learners' tacit intuition of language (from abstract UG principles)
 - Inspiration: Generative linguistics
 - Humans endowed with language-specific language module (modularity)

Two approaches to learner language

Amazon Mechanical Turk

https://workersandbox.mturk.com/mturk/accept?hitId=1BXBXITDEJHC

Who said my brother was kept tabs on by the FBI?	100
Who claimed that on Sundays more lawyers go to the gym than I do.	<input type="text"/>
What do you fear that the actors will forget on stage?	<input type="text"/>
What does the guest think that Casey baked?	<input type="text"/>
Who thinks the flyer from the actress promoted the new play?	<input type="text"/>
What did the reporter make the claim that Elizabeth saw?	<input type="text"/>
Who told you that the monologue that the actor who the movie industry was performing last month was extremely well written?	<input type="text"/>

What do you think that John bought?
* What do you wonder whether John bought?

Interlanguage: More than the sum of L1 & L2

She...runned away (L1 Japanese)

...he falls a piece of note into dough by mistake (L1 Korean)

A wall was falled down in order to get a bigger green house (L1 Spanish)

- Important generalizations about interlanguage:
 - different from L2 input
 - different from L1 representations
 - similar to children's developing L1

Cognitive explanations

- Usage-based emergentist theories:
 - Grammar is **inductive**, experience-driven (see next section)
 - Input frequency and saliency + human **categorization** abilities explain development
 - Variability is a sign of development
 - Language learning is driven by multiple forces

Cognitive explanations

- Categorization: an ability to identify tokens as instances of a particular type

Formula-based learning: Stuff of acquisition

- Learner uses memorized bits and pieces of language (i.e., **formulas**)

Wait a minute, You know what?, Here's the plan, fake news, I messed up, Gotcha, Good morning, Better safe than sorry, I don't know, in the end, What's up? Nothing much?, at the end of the day, How come? I don't care

Formula-based learning: Stuff of acquisition

Time	Formulaic part...	...Slot variation part	
1	How do you do dese?		Formulas
2	How do you do dese...	...flower power ...little tortillas ...in English	Low-scope patterns
3	How do you...	...like to be a cookie cutter ...make the flower	
4	How...	...did dese work? ...do cut it? ...does this color is?	Constructions

Four interlanguage processes

- Learners' internal knowledge undergoes changes
 - **Simplification:** one form/one meaning (*te i-ru* → progressive)
 - **Overgeneralization:** morphology (*-ing* [*I talking*], *-ed* [*I runned*])
 - **Restructuring**
 - U-shaped behavior: progress ≠ accuracy
 - under restructuring

PsychoPy: Lesson 2

Assignment: Reference

Assignment I: Reference list

- You will develop a list of references **based in part on** Supasiraprapa's (2019) study
- Your reference list must:
 - include two or more articles published since 2019
 - contain both theoretical papers in SLA as well as empirical studies
 - conform to APA format and stay within a one-page limit
- Assignment will provide the basis for the literature review of final paper

Next week...

- **Topic:** Learner language (continued)
 - Is L2 development systematic? The case of negation and morphology
 - When does L2 development come to a stop?
- **Reading:**
 - USLA (6.7, 6.9, 6.10, and 6.13)
- **Assignment:**
 - Reference list (End of this week)
 - PsychoPy (End of next week)
